Project Description: _____

_____

Project Location: _____

_____

Pole structures used for agricultural purposes (feeding, loafing and similar types of uses) located in the flood plain will require a flood elevation certificate. However, the requirement that the floor of the structure meet or exceed one foot (1') above the base flood elevation will be waived and a variance will not be required if the following conditions are met:

1. The structure shall not be located in high velocity areas, including watercourses and channel areas.

2. The structure shall be constructed with materials that are resistant to flood damage. This requirement shall apply to all materials that do meet or exceed one foot (1') above the base flood elevation.

3. The structure shall have no walls.

4. The structure shall not be used for storage of equipment and materials that are flammable, explosive or could be injurious to human, animal or plant life.

5. The structure shall have no electrical service.

6. The roof portion of the structure shall be a minimum of one foot (1') above the base flood elevation.

7. Wet Flood Proofing Certification will be required for the structure. The structure shall be certified by a registered professional engineer or architect that the structure as built has been designed to prevent floatation, collapse or lateral movement from the result of hydrodynamic and hydrostatic loads including the effects of buoyancy.
